- Certification: Oracle Certified Professional Java Programmer – OCPJP 6, scored 95%

Experience

Red Hat

Senior Software/AppDev Consultant

January 2019 - Present (7 years 6 months)

Des Moines, Iowa Area

As a Red Hat consultant focusing on developing enterprise applications, I have been helping our clients solve their business challenges with my expertise in agile methodologies, DevOps best practices, and full-stack development. My work includes:

- Apply CI/CD pipelines with Jenkins and container-based deployments using Openshift/Kubernetes
- Develop front-end Angular applications utilizing the latest tools and best practices, including mono-repo pattern, RXJS, NGRX, etc.
- Implement back-end micro-services using latest opensource technologies: gRPC, Spring Integration, etc.

Dice

Software Engineer

January 2018 - January 2019 (1 year 1 month)

Urbandale, IA

I had a chance to work with multiple job posting related services, including Job API, third party job integration, and batch posting services.

Our team mainly focused on developing a new platform for posting jobs on our website using latest technologies and leveraging many serverless services provided by AWS, such as API Gateway, Lambda, S3, and DynamoDB.

Our work included:

- Leveraged Amazon Web Services in software development
- Integrated with various ATS' and partner's services using REST and OAuth
- Developed serverless architecture for job posting service
- Developed CI/CD pipelines using Jenkins, Terraform and AWS

CloudFormation, enabling daily production releases

- Developed Administration API service for job posting configurations and reporting, using AWS API Gateway and AWS Lambdas written in Python 3.6
- Developed Administration and Reporting UI using TDD with Angular 6, Jasmine, and Karma test runner

Cerner Corporation

Software Engineer

May 2014 - January 2018 (3 years 9 months)

Kansas City, Missouri Area

We worked on providing Healthcare solutions and focused specifically on developing software and tools that facilitate real-time financial transactions between Cerner platforms and our partners.

Our team provided multiple EDI-based transaction services to our internal clients. We used both reputable open-source tools such as Spring, EJB, JPA/ Hibernate, JAX-RS, etc. as well as IBM specific tools for Healthcare industry, including WTX to transform between X12 format and XML/ JSON, and BPM to build enterprise-level business process implementations. Projects I worked on:

- EPayment Service: A PCI compliant service that provides hospitals and facilities with credit card payment ability through different Cerner's solutions
- Eligibility Service: A service Implementing processes and business rules to provide a single endpoint to clients with different request and response structure into EDI 270 and 271 messages presented to our clearinghouse partners.
- Transaction Administration Tool: An enterprise management web application that facilitates support for Production Administrators and Client Enrollment Team.
- DevOps: Shell scripts and Chef implementations to automate the Continuous Delivery process and System stability.

Wells Fargo Home Mortgage
System Engineer/Java Developer
September 2013 - May 2014 (9 months)
Urbandale

- Communicated with business analyst to understand business requirements and convert them into functionality
- Converted all client-side codes using Google GWT into HTML, CSS, Javascript/AngularJS/JQuery
- Built REST web services using Spring controller and JSON AJAX calls for client-server integration
- Wrote test cases for both client and server codes as new development progresses.
- Wrote and debugged codes using SOAP web services and JMS for integration part with other internal and external systems
- Wrote persistence services and complex native SQL queries against Oracle database for development, testing and production support.

Education

Baylor University
Master of Science (MSc), Information Science/Studies · (2012 - 2013)
